Computer Science 336  
Fall 2013  
Presentations: December 12 and 16  
All materials due Friday, December 13 by midnight

• Attendance at all presentations is required.

• Presentations are limited to 8 minutes. Please be prepared. You should have a few slides or similar graphics to help present an overview of what you're doing and how it's done, and you'll need to demo your code. Be prepared to answer questions. You can show code snippets if that is the best way to explain things, but please do so selectively. You can borrow images and/or diagrams from websites, as long as you cite the source.

• Your slides should include a bibliography with all references/websites you used.

• All deliverables are officially due by midnight Friday 12/13. (However, there will be no particular penalties as long as we have everything by Wednesday, 12/18). Deliverables include, in particular, your slides (and any other visual aids) and your source code. If the format of your code is anything different than the VS projects we have used for examples and homework, you must include complete build instructions as well as any additional libraries, etc., that would be needed for the staff to build your code.

Grading:

30% Presentation content and demonstrated understanding of topic
20% Presentation slides and/or visuals, oral communication
50% Project implementation
